

# SIXTH FORM MATHEMATICS SCHOLARSHIP

## Explanatory notes

As a specialist Mathematics school St Marylebone offers Mathematics Scholarships to Sixth Form students. We are looking for people who are passionate about Mathematics, have a high level of aptitude and a proven commitment to their subject above and beyond the current requirements of any courses they are currently studying. If that describes you and you are intending to study both Mathematics and Further Mathematics at A Level then you should apply.

Successful candidates benefit from a scholarship package which will include:

- Mathematics and Further Mathematics literature bursary (Mathematics Scholars)
- Position of Mathematics Ambassador for the school
- A range of workshops, competitions, speakers, trips and master classes
- Higher Education Mentoring Programme and individualised UCAS application support

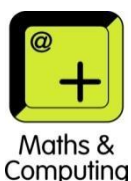

If you are talented in Mathematics and are applying for Maths and Further Maths at A Level then you are eligible to apply.

Internal candidates should note that if you already hold a scholarship this does not automatically carry over into Year 12 and you must reapply.

You can still apply to take an A Level in Mathematics without applying to be a Mathematics Scholar. The scholarship scheme is an **additional** option for students.

## How do I apply?

Fill out the scholarship section on your online application. If you are shortlisted you will then be invited by the Maths department for a test and an interview. Further details about the interview procedure will be sent to you with your interview invitation.
